

Wheelset Supplier Qualification/ NDT Certification

Wheelset Supplier Qualification / NDT Certification

Organisations involved in the maintenance or supply of wheelset components are required to be an approved supplier against Railway Group Standard GM/RT 2470. Dependent on the scope of work you undertake, you may also be required to hold Certification for NDT as required by Railway Group Standard GM/RT 2005.

Your system and procedures should be integrated with your QMS such that these requirements are demonstrated throughout the assessment.

The QSS Group Limited is an approved body for undertaking the assessments, which lead to qualification of your business. Our Engineers have experience that makes them 'leaders in their field' for Wheelset Qualification and NDT Certification.

We will work with you to evaluate your processes and procedures, we will support you in implementation of required actions that may be necessary to achieve the high level of compliance demanded by the Industry and once approval is recommended, submit your recommendation of 'an approved supplier' to RSSB.

Wheelset Qualification is given for a period of six years, during which time surveillance visits are required, each two years.

NDT Certification is a two-year periodicity with an annual surveillance requirement. The reports that are produced are comprehensive documents that provide in detail the facilities, capability, competence and level of technical compliance your Company is delivering. Where required actions are identified, QSS will work with you to develop solutions and improvements needed to gain your supplier qualification.

If you need support for Wheelset Supplier Qualification and NDT Certification, call us now and receive re-assurance on what needs to be done.

The QSS Group Limited are the major approval authority for both Wheelset Supplier Qualification and NDT Certification of suppliers to the UK market.
